

The Holbrook Club

3G Artificial Turf for Football

The Holbrook Club is Horsham's premier sports and social club, providing a wide range of facilities and activities for the local community. Sport is very much at the club's core supplemented by a strong events and social calendar, ensuring there is a most likely something on offer for everyone.

The new 37m x 36m football pitch features a state of the art 60mm monofilament 3G football turf playing surface. The area provides two 5 a side areas, separated by a new demountable pitch dividing system, or a 7 a side pitch, with rebound quality weld mesh panel fencing to the perimeter.

Prior to installation of the artificial turf system, the existing tennis courts had to be prepared with the tarmacadam surface being power cleaned and pierced through to the stone foundation to enhance vertical drainage. New pre-cast concrete kerb edging was also installed around the perimeter.

Client The Holbrook Club

Facility 3G Artificial Turf for Football. 1332m².

Removal and disposal of perimeter chainlink fencing. Preparation of existing tarmacadam surface. Line marking for 5 and 7 a side football. Provision of new fencing systems, 5 a side goals and player signage.

“ Working with S&C Slatter on this project was stress and hassle free as their experienced team took complete control and ensured the entire project was delivered on time and budget, with regular updates on project progress.”

Matthew Russell, Club Manager, The Holbrook Club
